SHOCKWAVE THERAPY NOW AVAILABLE

What is Shockwave Therapy?

Shockwave therapy makes use of acoustic, high-energy sound waves to treat a wide range of soft tissue and bony conditions. Acoustic waves generated by the shockwave interact with tissue causing proven biological effects leading to accelerated tissue repair and cell growth, analgesia, and mobility restoration.

When used appropriately in conjunction with biomechanical assessment and rehabilitation, shockwave out-performs conventional conservative management.

**Talk to your physio to see if Shockwave Therapy
would benefit your recovery**
